

A manager had a **hunch**. Org IQ **turned it into proof.**

One manager suspected something was off with an employee who had been underperforming.

Org IQ got to the bottom of it in no time: The employee had emailed client data to a personal account.

What started as a gut feeling became actionable evidence within minutes.

**Here's what they
had to say about
their experience.**

P.S. The “**email vault**” in question
was our **pre-rebrand** compliance-
forward **brand name**.

I shouldn't be as happy as I am about this but I got to fire this real as [REDACTED] thanks to email vault. He emailed his personal email two spreadsheets of client info. Thank youuuuu!

He was on a PIP, severely underperforming, and pulling some shady s [REDACTED] t. I just had a hunch. Told [REDACTED] to dig into his emails and sure enough!

Issues rarely begin with formal reports. They appear first in everyday communication patterns:

Employees sending files externally, conversations turning tense, complaints forming quietly across teams.

Org IQ surfaces those signals early so leaders can act before problems escalate.
